DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement has been received and considered.

Claim Objections

2. The term "brake chamber" is not clearly understood. From the drawings it would appear this element is a hub.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 9,10,12-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gebhardt et al. in view of Pollinger and Schwarz et al..

Regarding claims 9,10,12-16 Gebhardt et al.shows in the several embodiments two relatively movable elements 13and 14 used to secure the brake disc 5 to the hub 2,3. Note only one arrangement is shown but presumably there are two other similar arrangements that have not been shown (such as illustrated in Pollinger), thereby meeting the requirement of having "at least two pairs of bodies, with each pair including two bodies inserted into one another..."

Lacking is a description that these pairs can be secured into a hub-rotor arrangement via a casting process.

Art Unit: 3683

The reference to Schwarz et al. shows a similar securing arrangement to that of Pollinger. In column 2 lines 23-40 Schwarz et al. states a number of different options can be employed to secure the hub to the rotor, one of which includes molding the pins into the bearing part by a casting in process.

One having ordinary skill in the art would have found it obvious to have cast the movable sleeve arrangement in Gebhardt et al. into the hub-rotor 2,5, as taught by Schwarz et al., as an obvious engineering alternative to that of Gebhardt et al.

Allowable Subject Matter

5. Claim 11 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Please review the prior art cited by the examiner for the different alternatives that can be used to secure the rotor to the hub.
